submissions:  
28 April 2018*

#### **Message from the Guest Editor**

Dear Colleagues,

The Web is getting much more complex: On the one hand, the Web is now highly ubiquitous with the variety of internet connected devices, and, on the other hand, more and more data are linked and available on the Web. In this respect, novel approaches and technologies for design, development, and evaluation of interactive web solutions, as well as analysis and investigation of human behavior in such web environments are necessary.

The purpose of this Special Issue is to bring together state-of-the-art research articles on the interactive web. We encourage authors to submit original research articles, case studies, reviews, theoretical and critical perspectives, and viewpoint articles on interactive web technologies.

Assoc. Prof. Ahmet Soylu
